Personal Summary

Recent graduate from the Faculty of Computers and Artificial Intelligence, specializing in Computer Science. **Front-End Developer** with a passion for creating **scalable, user-friendly, and interactive web** applications using React. Strong **problem-solving skills** and a focus on UI/UX design to craft seamless digital experiences that enhance usability and engagement. Experienced in projects like **Rooted in the City (Gzoor)** and **Essence**, utilizing **React, Bootstrap, and Axios**. Detail-oriented and client-focused developer who excels in collaboration and **delivering high-quality solutions** on time. Excited to apply skills, tackle new challenges, and advance in the field of web development.

Projects

Rooted in the City project (Graduation_Project)

- the Virtual Farm Platform is a digital solution that **bridges the gap between urban residents** interested in agriculture **and farmers** with available land. It allows users to remotely **manage and monitor real plants** on actual farmland, providing a unique opportunity for urban dwellers to engage in agriculture while offering farmers an additional revenue stream.
- Built using React, with Axios for **API integration**, Bootstrap for styling, and SweetAlert2 for user notifications. >> Go To [GetHib](#)

HRMS Project (Human Resource Management System)

- Developed a modular, web-based HR management system using ASP.NET Core MVC. The system supports employee management, payroll, leave tracking, role-based access control, and project/task assignment with secure authentication and a responsive interface. >> Go To [GetHib](#)

Women's Products E-commerce Project (Essence)

- Exclusive Perfumes and Accessories: Offers a curated selection of high-quality fragrances and luxurious accessories.
- User-friendly Interface: Designed to enhance the shopping experience with seamless navigation.
- Responsive Design: Ensures compatibility across all devices.
- Built using React, with Axios for API integration, Bootstrap for styling, and SweetAlert2 for user notifications. >> Go To [GetHib](#)

IKEA-Inspired E-commerce Project

Developed an e-commerce web application inspired by IKEA, featuring:

- Category-based Navigation: Organized product display for seamless browsing.
- Shopping Cart Functionality: Users can add, remove, and adjust product quantities.
- Admin Interface: Manage products, categories, and inventory.
- Responsive Design: Ensures optimal usability across devices.
- Built using HTML , CSS , JS >> Go To [GetHib](#)

Education

- **Bachelor's Degree:** Faculty of Computers and Artificial Intelligence, Benha University
 - **Major:** Computer Science
 - **Expected Graduation:** 2025
-

Skills

Technical Skills:

- Programming Languages: HTML, CSS, JavaScript, bootstrap , python , C# , SQL , C++
- Frameworks: React
- Full Stack Development with .NET
- User Experience (UX) Design

Soft Skills:

- Effective Communication
 - Teamwork
 - Problem Solving
-

Professional Training

- National Telecommunication Institute (NTI) , **Web Development**
 - Information Technology Institute (ITI) , **Frontend Development with React**
 - DEPI , **Full Stack Development with .NET**
 - AUC , **English**
 - Zewail University , **AI**
-

Languages

- English
- Arabic (basic)
